Objectives of the seminar:

The fundamental concept of chemistry revolves around the study of matter and its interactions. At its core, chemistry is concerned with understanding the composition, structure, properties, and reactions of substances. The main aim of the seminar is to encourage the students to participate in the discussion of the topic that were covered in their syllabus (Semester-I). They will present several topics related to Organic, Inorganic and Physical Chemistry. This will provide a chance to interact with their classmates. Discussing about the relevant topics of the particular subject, students tend to learn about the latest information and new skills related to the concerned subject.
